- Custom configurations available

The *ViaTraveler* is a zero fleet winch designed for moving horizontal loads up to 60 feet. This unit has been specifically manufactured to work in conjunction with all standard stage curtain tracks. Its zero fleet capability permits close placement of unit to pulleys and eliminates concern with fleet angles. Its closed loop design allows for bi-direction motion of any horizontal movement. In addition *ViaTraveler* can be installed in any orientations and has one of the smallest cubic areas on the market.

*ViaTraveler* is a powerful, versatile, and easy to use curtain draw machine that offers a cost-effective solution for most motorized curtains.
