

RIGGING EQUIPMENT Fire Stop

This UL Listed electromagnet release system is designed for use with both smoke hatches and fire safety curtain systems. The 120v single phase unit includes a track guided sheave that is linked to a low voltage magnet to induce the required cable release emergency operation. It is designed for either normally open or normally closed contact signals from a fire alarm panel. A 1.5 hours battery backup is included to hold the release system in the event of a power failure. An audible buzz will sound when the battery's power begins to get low, indicating that release of the system will occur.

TECHNICAL DATA

Part #	WFS
Materials	-16 ga steel formed plate, powdercoated -Strut mounting frame -Track guided release pulley
Weight	-120v input power -1.5 hours of battery backup life -Audible AC power loss alarm -Normally open or closed contacts -LED indicator lights to note power or battery operation
